notes storage facility to manage data such as rich text documents (formatted text and images) and other document files with attachments. This database is the central component of the Domino architecture. Core services include the following server functions: Web, database, email, applications, and directory.

What is Lotus Domino? - Definition from Techopedia

You can specify an administration server for the Domino® Directory and for specific databases. By default, the first Lotus® Domino server you set up in a domain is the administration server for the Domino Directory. The administration server for the Domino Directory maintains ACLs of the Domino Directory, performs delete and rename operations in that Domino Directory, and replicates these changes to the other servers in the domain.
