I own the 1972 5th edition of this book, which is approx 300 pages. The older edition is a thorough,

practical coverage of the mathematics of finance with many real-world examples. Contains a very thorough chapter on the mathematics of bonds. Anyone with an interest in finance and a serious aptitude for algebra would enjoy this book.

Finance A deposit of dollars today at a rate of interest P for years produces interest of t r I = Prt.The interest, added to the original principal P, gives P + Prt = P11 + rt2. This amount is called the future value of P dollars at an interest rate r for time t in years. When loans are involved, the future value is often called the maturity value of

the loan.
