For the MySQL connector driver you have to insert: com.mysql.jdbc.Driver. If you use any other kind of driver, you have to look at the manual for the correct driver name. Enter the name of the user you wish to connect, and mark the checkbox if this user needs a password.

OpenOffice.org Base - Tips 'n' Tricks

Now openoffice base does not have an equivalent to dlookup, so I'm assuming that I would have to use write some sort of sql query to do this. subforms are not what i'm looking for, I just want to select data from multiple records in the childtable and combine it with the single unique record in the parent table.
