Stress is a state of threatened homeostasis caused by intrinsic or extrinsic adverse forces (stressors) and is counteracted by an intricate repertoire of physiologic and behavioral responses aiming to maintain/reestablish the optimal body equilibrium (eustasis). The adaptive stress response depends upon a highly interconnected neuroendocrine, cellular and molecular infrastructure, the stress ...

Stress, Endocrine Physiology and Pathophysiology ...

Pathophysiology is concerned with the disturbance of normal mechanical, physical and biochemical functions. The word pathophysiology is a combined word from the Greek pathos, which means disease, and physiology is related to the numerous normal functions of the human body.
