The period is mostly determined by the length of the pendulum. The period increases as the pendulum gets longer, and decreases as it gets shorter. Therefore, making the pendulum shorter will speed up the clock. Correct Answer: C. She could shorten the length of the pendulum. Changing the mass of the bob has no effect on the pendulum period.

Galileo's pendulum clock was never completed, but it served as inspiration for Christian Huygens' invention in 1656. In the Pendulum Clock Gizmo , students can experiment with four different factors: the length of the pendulum, the weight of the pendulum, the starting angle, and the force of gravity (students can conduct the experiment on Earth or Jupiter).

Perform experiments with a pendulum to gain an understanding of energy conservation in simple harmonic motion. The mass, length, and gravitational acceleration of the pendulum can be adjusted, as well as the initial angle. The potential energy, kinetic energy, and total energy of the oscillating pendulum can be displayed on a table, bar chart or graph.
