A list of the databases on a given server can be retrieved from the same PIAFDatabase.servers attribute. Each item in the dictionary of servers is a dictionary with two items, server and databases.The first contains the raw server object from the SDK, while the databases item is a dictionary of {name: object} pairs. So to get the databases for a given server you can use the following code:

Connecting to a PI AF Database — PIconnect 0.8.0 documentation

Unilint startup parameters, refer to the Unilint Interface User Manual. At startup, the PI OPC DA interface performs the following steps: 1. Connects to PI Server (unless disconnected startup is configured) 2. Gets PI points from PI Server 3. Connects to OPC server 4. Creates OPC groups 5. Adds items to groups 6.
